

KOBE Range Hoods

"So Quiet...You Won't Believe It's On!"

Replacing Halogen Light Bulb with G4 LED Bulbs

Note: The halogen light used in these images is 12 volts/ 20 watts, G4 base.

Figure 5

Figure 6

Steps:

1. Make sure all controls are off and range hood is unplugged.
2. If preferred, remove the halogen light fixture from the hood body. Otherwise, the halogen light fixture can be left on the hood body.
3. Using a flat head screw driver, gently remove the halogen light glass cover as seen in figure 2.
4. Gently pull out the defective light bulb and discard as seen in figure 5.
5. Put the new light bulb in by pushing securely into the light socket (action similar to figure 5).
6. Return halogen light glass cover to the housing.
7. Turn range hood ON to test for operation.

Important Notes:

- Before purchasing a replacement bulb, check the volts/watts of your current halogen light.
- For the bulb type, Kobe uses **JC-Type, G4 base, Halogen Lights**.
- G4 Halogen Lights may be replaced with G4 base LED Lights.
